SUBJECT: Unexploded Ordnance (UXO) Safety

Background

UXO stands for unexploded ordnance. UXO result from our military's use of munitions during live-fire training or testing. UXO are considered the most dangerous category of military munitions. Although the conditions that define military munitions as UXO are specific, the public should consider any munitions or suspect munitions it encounters as UXO and as extremely dangerous. It is important to remember the three R's of munitions safety when you think you may have come across UXO — **Recognize, Retreat and Report.**

Even very small UXO can be extremely dangerous and should be treated with caution. If you see UXO get away from it and report it to local law enforcement officials.

After decades of activities required to maintain our military's readiness, UXO and other military munitions may be present at many active and former military installations across the country. Although military munitions will most likely be found in areas that the Department of Defense currently uses or used in the past, they could be encountered anywhere.

When military munitions do not function as intended during use, they become UXO. Some people consider these "duds" and think they are safe to handle, but that can be a costly mistake to make. Treat all UXO as live and never handle it.

UXO Can Include:

- Bombs
- Artillery projectiles, rockets and mortars
- Land mines and grenades
- Guided missiles
- Torpedoes and depth charges
- Flares and pyrotechnic devices
- Bulk explosives and propellants

UXO can be hard to notice, especially when it has had years to settle into place. Make sure to be aware of the possible UXO in places like deep grass, heavy foliage or thick brush.

The Three R's of Munitions Safety

Recognize – There is no one way to describe UXO. UXO can come in many shapes and sizes. It can be rusty or look like new. It can be out in the open, hidden in bushes or partially buried. The important thing to remember is that if you see what you think is UXO then you should retreat from the area and report it to authorities.

Retreat – Make sure to never touch UXO, as they can be extremely dangerous. If you see UXO, immediately leave the area and do not disturb the item.

Report – If you come across what you think might be UXO, you should leave it be and report it to your local law enforcement by calling 911. They will be able to take care of the item. Do not use your cell phone near the item. Call 911 after retreating from the UXO.

Safety Tips in Case You Come Across UXO

- **Never** approach a suspected explosive ordnance item.
- **Remember** you can come across UXO anywhere, but make sure to be especially aware in areas with signs warning of the dangers posed by UXO.
- **Remember** no matter how old or damaged UXO may look, it can still be just as dangerous, if not more dangerous, than the day it was made. Some UXO has been found dating back to the Civil War.
- **Never** attempt to disassemble, clean or handle any UXO.
- **Never** keep found UXO as souvenirs or “trophies.” If you know someone who keeps UXO and believes it is harmless, explain to them how dangerous it really is.
- **Never** transmit radio signals near UXO, that includes cell phones. Retreat from UXO before calling law enforcement officials.
- **Report** ordnance to law enforcement officials.

This is a sign that might be posted to warn that an area has a high chance of containing UXO.

For More Information
